REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: applicant recites a truck for a railroad car comprised of an H-shaped truck frame including parallel side frames connected by a transom at intermediate points of the side frames. An end beam extends in a lateral direction of the railroad car and connected to end portions of the right and left side frames of the truck where the end beam includes left and right support brackets whose outer ends are connected to the right and left side frames and a center bar connected to inner end portions of the right and left support brackets through a deformation absorbing means and having an instrument attachment portion with the end portion being configured to support an instrument. The deformation absorbing means is included in the end beam and located at both sides of a portion of the end beam, where the instrument is supported, for absorbing torsional force acting on the end beam.

The prior art made of reference, taken singularly or in combination, does not adequately disclose the features recited in the instant claims.

Specifically, the prior art does not show the rail car truck structure in combination with a deformation absorbing means and a mounted instrument.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
